

TheaterCurve XMask

The Ultimate Curved Screen with a 2 or 4-way masking system

France - Nantes, September 1st 2006 – Screen Research is pleased to announce the launching of its brand new curved screen : The TheaterCurve XMask.

Screen Research will now present as a worldwide exclusivity the only fixed curved screen with a 4-way masking system: The TheaterCurve XMask Ultimate. You'll be able to see that screen at the Cedia Expo US from September 13th to 17th, in Denver – Booth 655.

« The TheaterCurve is the ideal match for the new projectors with anamorphic lenses. The slightly curved screen corresponds exactly to the curve on the anamorphic lens. The image in 2.35 ratio is perfectly balanced » Yves Trélohan, CEO Screen Research.

Last March, Screen Research announced the launching of a whole series of curved screens – All this range of products is now known as the TheaterCurve range.

First available as a fixed screen only (in 16/9 and 2.35 ratios), Screen Research is proud to announce a whole new range of XMask curved screens.

The TheaterCurve XMask has been presented with a two-way masking system in Munich High-End trade-show in May 2006 in Germany and in London at the Cedia Expo in June 2006 in the United Kingdom.

The TheaterCurve, as a fixed screen or an XMask, is built with the unique woven fabric ClearPix2, certified THX and ISF for its sound transparency and outstanding image qualities. ClearPix2 is recognized as the best acoustically transparent projection screen fabric in the world.

About Screen Research

Screen Research is comprised of scientists and business professionals with years of experience in Audio Visual Design and Technology with the goal of bringing innovative and solution-oriented products to the Home Theater Market. Screen Research is specialized in acoustically transparent video-projection screens of the highest quality especially designed to match today's modern fixed pixel projectors (LCD, DLP, L-COS etc). The company offers a full range of fixed and motorized screens up to the most sophisticated solutions - fixed screens with masking systems and "Le Wing", the only retractable screen with speaker system on the market. The products have rapidly been recognized and awarded for bringing significant improvements to existing technology. Headquartered in Nantes, France, Screen Research distributes its products worldwide via a privileged network of distributors, dealers and integrators.
