

## COMING ATTRACTIONS

### Screen Research

"Invisible" is a word that specifically applies to visual characteristics. Unfortunately, the dictionary offers no word for an object that is sonically invisible. Well, Mr. Webster needs to talk to the folks at Screen Research and check out their acoustically transparent ClearPix1 screen material (also called CP1 microfiber fabric). CP1, which is a more affordable version of their CP2 material, allows you to place your center-channel speaker behind the screen for what the company claims is completely undisturbed, unfiltered sound quality. The 0.95-gain screen has a blue tint, and it is offered with a number of Screen Research's screen frames. Prices start at \$925.
